

IN THE CLAIMS

1. (Currently Amended) A method, comprising the steps of:
monitoring a first device by a second device;
determining, by the second device, whether a current device driver in the first device
is a desired device driver; and

A
first transferring the desired device driver from the second device to the first device
when it is determined that the current device driver in the first device is different from the
desired device driver, wherein the current device driver and the desired device driver are
configured to control operations of the first device;

determining whether a user of a third device desires the desired device driver to be
transferred to the third device when the user of the third device accesses the first device; and

second transferring the desired device driver from the first device to the third device
when it is determined that the user of the third device desires the desired device driver to be
transferred to the third device. B1

2. (Original) The method according to Claim 1, wherein the step of first transferring
further comprises:

first transferring the desired device driver from the second device to the first device
using at least one of a direct connection message, a network mail message and an electronic
mail message when it is determined that the current device driver in the first device is
different from the desired device driver, wherein the current device driver and the desired
device driver are configured to control operations of the first device.

3. (Original) The method according to Claim 1, wherein the first device is connected
to a first network and the second device is connected to a second network.

4. (Original) The method according to Claim 3, wherein the first and second networks are connected by a third network.

5. (Original) The method according to Claim 1, wherein the step of first transferring further comprises:

first transferring the desired device driver and desired device driver information from the second device to the first device when it is determined that the current device driver in the first device is different from the desired device driver, wherein the current device driver and the desired device driver are configured to control operations of the first device.

6. (Original) The method according to Claim 5, wherein the desired device driver information includes at least one of

information indicating a version of the desired device driver,
an effective date of the desired device driver, and
an indication of an operating system for the desired device driver.

7. (Canceled)

8. (Canceled)

9. (Currently Amended) A method, comprising ~~the steps of~~:

determining whether a user of a first device desires a desired device driver of a second device to be transferred to the first device when the user of the first device accesses the second device; and

transferring the desired device driver from the second device to the first device when it is determined that the user of the first device desires the desired device driver of the second device to be transferred to the first device, wherein the desired device driver is configured to control operations of the second device by the first device ^{B2}

9
10. (Original) The method according to Claim ⁸ 9, wherein the step of transferring further comprises:

transferring the desired device driver from the second device to the first device when it is determined that the user of the first device desires the desired device driver of the second device to be transferred to the first device using at least one of a direct connection message, a network mail message and an electronic mail message, wherein the desired device driver is configured to control operations of the second device, and wherein the second device comprises a business office appliance.

16
11. (Currently Amended) A system, comprising:

a first device; and

a second device configured to monitor the first device, to determine whether a current device driver in the first device is a desired device driver; and to transfer the desired device driver from the second device to the first device when it is determined that the current device driver in the first device is different from the desired device driver, wherein the current device driver and the desired device driver are configured to control operations of the first device; and

a third device configured to determine whether a user of the third device desires the desired device driver to be transferred to the third device when the user of the third device accesses the first device.

wherein the first device is further configured to transfer the desired device driver from the first device to the third device when the third device determines that the user of the third device desires the desired device driver to be transferred to the third device

11
12. (Original) The system according to Claim 10, wherein second device is further configured to transfer the desired device driver from the second device to the first device using at least one of a direct connection message, a network mail message and an electronic mail message.

12
13. (Original) The system according to Claim 11, wherein the first device is connected to a first network and the second device is connected to a second network.

13
14. (Original) The system according to Claim 12, wherein the first and second networks are connected by a third network.

14
15. (Original) The system according to Claim 11, wherein the second device is further configured to transfer desired device driver information from the second device to the first device.

15
16. (Original) The system according to Claim 15, wherein the desired device driver information includes at least one of

information indicating a version of the desired device driver,

an effective date of the desired device driver, and

an indication of an operating system for the desired device driver.

18. (Canceled)

¹⁷
~~19~~. (Currently Amended) A system, comprising:

a first device; and

A
/
Inv

a second device, wherein the first device is configured to determine whether a user of the first device desires a desired device driver of a second device to be transferred to the first device when the user of the first device accesses the second device, and the second device is configured to transfer the desired device driver from the second device to the first device when the first device determines that the user of the first device desires the desired device driver of the second device to be transferred to the first device, wherein the desired device driver is configured to control operations of the second device by the first device,^{B4}

¹⁸
¹⁷
20. (Original) The system according to Claim ~~19~~, wherein the second device is configured to transfer the desired device driver from the second device to the first device using at least one of a direct connection message, a network mail message and an electronic mail message, and wherein the second device comprises a business office appliance.

¹⁹
21. (Currently Amended) A program product including a computer readable medium embodying program instructions for causing a system to perform the steps of:

monitoring a first device by a second device;

determining, by the second device, whether a current device driver in the first device is a desired device driver; and

first transferring the desired device driver from the second device to the first device when it is determined that the current device driver in the first device is different from the desired device driver, wherein the current device driver and the desired device driver are configured to control operations of the first device;

determining whether a user of a third device desires the desired device driver to be transferred to the third device when the user of the third device accesses the first device; and

second transferring the desired device driver from the first device to the third device when it is determined that the user of the third device desires the desired device driver to be transferred to the third device.

²⁰
~~22~~. (Original) The program product according to Claim ¹⁹~~21~~, wherein the step of first transferring further comprises:

first transferring the desired device driver from the second device to the first device using at least one of a direct connection message, a network mail message and an electronic mail message when it is determined that the current device driver in the first device is different from the desired device driver, wherein the current device driver and the desired device driver are configured to control operations of the first device.

²¹
~~23~~. (Original) The program product according to Claim ¹⁹~~21~~, wherein the first device is connected to a first network and the second device is connected to a second network.

²²
~~24~~. (Original) The program product according to Claim ²¹~~23~~, wherein the first and second networks are connected by a third network.

²³
~~23~~. (Original) The program product according to Claim ¹⁹~~21~~, wherein the step of first transferring further comprises:

first transferring the desired device driver and desired device driver information from the second device to the first device when it is determined that the current device driver in the first device is different from the desired device driver, wherein the current device driver and the desired device driver are configured to control operations of the first device.

A
|
²⁴
~~26~~. (Original) The program product according to Claim ²³~~25~~, wherein the desired device driver information includes at least one of

information indicating a version of the desired device driver,
an effective date of the desired device driver, and
an indication of an operating system for the desired device driver.

²⁶
~~29~~. (Currently Amended) A program product including a computer readable medium embodying program instructions for causing a system to perform the steps of:

determining whether a user of a first device desires a desired device driver of a second device to be transferred to the first device when the user of the first device accesses the second device; and

transferring the desired device driver from the second device to the first device when it is determined that the user of the first device desires the desired device driver of the second

Ins Bb
device to be transferred to the first device, wherein the desired device driver is configured to control operations of the second device, ^{*Bb*} by the first device;

^{*27*}
~~30~~. (Original) The program product according to Claim ^{*26*} ~~29~~, wherein the step of transferring further comprises

A
transferring the desired device driver from the second device to the first device when it is determined that the user of the first device desires the desired device driver of the second device to be transferred to the first device using at least one of a direct connection message, a network mail message and an electronic mail message, wherein the desired device driver is configured to control operations of the second device, and wherein the second device comprises a business office appliance.

^{*7*}
~~31~~. (New) The method of Claim 1, wherein the desired device driver is configured to control operations of the first device by the third device.

^{*16*}
~~32~~. (New) The system of Claim ^{*10*} ~~31~~, wherein the desired device driver is configured to control operations of the first device by the third device.

^{*25*}
~~33~~. (New) The program product of Claim ^{*19*} ~~31~~, wherein the desired device driver is configured to control operations of the first device by the third device.
